

ALEXANDER YEH

alexander.x.yeh@gmail.com (323)-538-2865

PROFILE

Software Engineer with I.T. & FinTech industry experience and recent Masters degree with focus on data analytics and emerging technologies. Seeking roles in Data Analytics, Business Intelligence, and AI/Machine Learning.

EDUCATION

Master of Science — Management Information Systems

2025

University of Arizona

GPA: 4.0

Bachelor of Science — Computer Science

2015

University of Notre Dame

WORK EXPERIENCE

Data Engineer, Software Engineer

2018 — 2023

Wilshire Associates — *Data Management Service*

- Created automated Python ETL pipelines using Pandas, Requests, and Selenium with SQL Server and Batch scripts to ingest data for the data warehouse, improving data quality and streamlining data delivery workflows.
- Developed SQL Server database objects (staging/reporting tables, Views, and Stored Procedures), automated via SQL Server Agent Jobs and monitored using SSRS reports to ensure timely delivery of business data.
- Built Full-Stack Flask and FastAPI web applications enabling external data operations, saving 40+ monthly hours of manual work and minimizing cross-timezone coordination delays by reducing reliance on the Data Team.
- Migrated legacy SQL Server Data Warehouse systems from on-premise data centers to Azure Cloud (Virtual Machines), ensuring production stability and continual business operations with minimal disruption.
- Experience providing data operations and support during Intra/Post-incident following Major Security Events.

Support Engineer, System Administrator

2016 — 2018

Wilshire Associates — *Client Service Technology*

- Provided support for proprietary financial applications via Citrix XenApp and Apache Tomcat, resolving client connectivity issues and handling service requests while ensuring application uptime for remote and hosted users.
- Managed client service requests in Salesforce and JIRA, coordinating escalations and ensuring timely resolution.
- Administered Windows Server virtual environments using VMware and Active Directory (GPO), managing user access and system configurations to ensure stable server operations.

PROJECTS

League of Legends AI-Assistant

Ongoing

- Developed a League of Legends AI assistant for game knowledge and player guidance, powered by a domain-specific model fine-tuned on gameplay data, champion information, patch updates, and derived analytics.
- Built data pipelines for knowledge-base ingestion using Riot Games API data, generating player-performance metrics, matchup statistics, meta analysis, and patch-impact insights, stored in SQLite and PostgreSQL.
- Deployed FastAPI services to Cloudflare and Supabase for model serving, data processing, and query handling.
- Built a hybrid retrieval-augmented generation (RAG) pipeline that combines structured game analytics with generated responses to increase factual accuracy and enable context-aware recommendations to queries.

Fantasy Football Statistical Analyzer

2025

- Designed an automated R script to gather NFL Data from Sleeper API for data analysis piped into various data visualizations to help distinguish trends based on player performances & User Team movements.
- Highlights include User Roster trends, Player Position Point averages & performances, Flex spot allocations (RB vs WR vs TE), Trade & Waiver Wire performances, Player performances on different Rosters

SKILLS

Programming Python, SQL, R, Javascript, HTML, CSS, C, C++, Batch/PowerShell, Bash/Csh

Frameworks Flask/Django, PyTorch, Jupyter, Scikit-learn, Pandas, FastAPI, PyODBC, SQLAlchemy, Selenium

AI/ML Regression, Classification, Clustering, Supervised/Unsupervised Learning, Claude, Codex, Huggingface

Database MS SQL, PL/SQL, Postgres, Data Warehouse, Dimensional Modeling (Star, Snowflake), ETL/ELT

Tools/Infrastructure Azure, AWS, Git, CI/CD, Docker, JIRA, Salesforce, Windows, Linux/UNIX

I.T. System Administration, Virtualization, Networking, Cloud, Security, Governance (ITIL, COBIT, NIST)
